## General information

### Who are we?

Aduler is a structure developed by the company "VECTOW Informatique" and specialized in high technology since 2003.

Aduler is now among the recognized experts in the field of security of online transactions, in the field of online payment and development of modules and extensions for PrestaShop.

Our goal is to provide to the general public the most advanced technologies.

Our extensions have made possible the creation and management of subscriptions on PrestaShop e-commerce sites; and the creation of marketplaces, allowing customers to become dealers.

### Other PrestaShop extensions developed by Aduler

#### Subscriptions Manager

The "Subscriptions Manager" extension, directly integrated in your Prestashop, displays a layer of management and simulation for recurring payments.

If your products or services are regularly ordered (magazine, box, products), help your customers to be delivered with confidence and without constraint by proposing a subscription method.

<http://www.aduler.com/en/modules/36-module-subscriptions-manager-for-prestashop.html>

#### Marketplaces Manager

Transform your Prestashop into a genuine Marketplace with our module.

Your customers will be able to become resellers by offering products and services in exchange of a commission.

<http://www.aduler.com/en/modules/38-module-dealer-prestashop-marketplace.html>

#### Paypal Recurring Payments and Subscriptions

The "PayPal Subscriptions and Recurring Payments" module allows you to integrate in your PrestaShop an additional payment method to manage your subscriptions and recurring payments.

<http://www.aduler.com/fr/modules/40-paiement-recurent-via-paypal.html>

## General information on the module

### Description and features

The module allows you to choose the payment methods that you want to display on your shop based on product categories.

Payment methods have different operating costs, it is financially attractive to offer some modes whose commissions are most advantageous.

After you have installed and configured our module, it applies a “layer” in the final purchase stage, making visible only shortlisted payment methods.

### Compatibility and Requirements

#### Compatibility

From PrestaShop **1.4.x** to **1.6.0.14**

#### ***Tips***

Our test focused on this slice of versions, this does not mean that the module is not compatible with earlier versions and that it will not be with the future.

#### Requirements

- To have a PrestaShop website operational and functional
- To have a compatible graphical theme and functional
- To have different methods of payment

#### Themes

Our tests are carried out with the default theme of PrestaShop, normally all themes are compatible; if you encounter a problem, thank you to perform a test with the default theme and if it persists refer to the section [Service and Support](#).

## Known errors

- Some payment modules have not been developed using "best practices", thus they pass through the restriction applied by our module when displaying the methods of payment, here's how to work around this problem:

Go to the FTP directory of the payment module that is problematic (which do not respect the restriction)

Open the file **Name\_Of\_Module.php** (for example if the module name is xyz, open the directory xyz, then the file xyz.php)

Locate the method **hookPayment ()** and / or **displayPayment ()**

Add at the beginning of the method the following code: **if (!\$this->active) return**

Save and test the display of the restrictions.

Example line to integrate into the **Name\_Of\_Module.php** file:

```
public function hookPayment($params)
{
    if (!$this->active) return;
```

## Technical Documentation

### First Installation and Configuration of the module

- Two methods are available to install a module on PrestaShop.
- We recommend you to use the first method at first (faster).

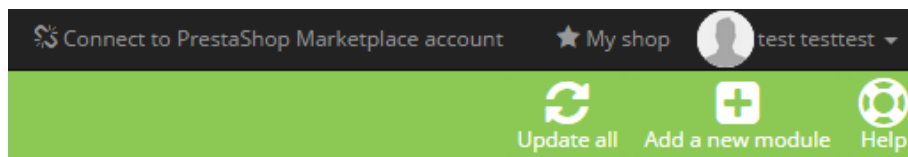

If that does not work we recommend that you use the second option.

#### 1st Installation method from the PrestaShop administration panel

This method allows you to download and install the module "Restriction of payment methods by Product Categories" directly from your PrestaShop admin panel.

1. Download the module "Restriction of payment methods by product categories" for PrestaShop in .zip file (archive) transmitted from the download link in your e-mail purchase confirmation, save it to your computer.

2. From your PrestaShop admin page, in the "Modules" panel, click "Add a new module" to access the download module setting.

3. Click on "Choose a File" and select the .zip file that you have downloaded from the download link. Then click "Upload this Module".

ADD A NEW MODULE

 The module must either be a Zip file (.zip) or a tarball file (.tar, .tar.gz, .tgz).

Module file

4. You should see the message: "Module uploaded successfully".

5. In the list of modules, locate the module "Restriction of payment methods by product categories" and click on "Install."

 Module(s) installed successfully.

Your Module "Restriction of payment methods by product categories" is now installed, you can now apply your settings (Skip to the next chapter).

### 2nd Installation method manual with module's transfer by FTP

In this method, we assume that you know how to extract a .zip archive and access to the FTP server of your website.

1. Download the module "Restriction of payment methods by product categories" for PrestaShop in .zip file (archive) transmitted from the download link in your e-mail purchase confirmation, save it to your computer.
2. Extract the contents of the archive on your computer.
3. Move the folder "psc" from the archive to the FTP server of your PrestaShop website, in the /modules folder.
4. Log-in to your Back-Office / Administration Panel PrestaShop then go to the menu "Modules> Modules".
5. In the list of modules, locate the module "Restriction of payment methods by product categories" and click on "Install".

|--------------------------|-------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|
| <input type="checkbox"/> |  | Front Office Features<br>Restriction of payment methods by product categories v1.6.0 - by Aduler.com<br>Restricts payment modules according to your defined categories | <input type="button" value="Install"/> |
|--------------------------|-------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|

 Module(s) installed successfully.

Your Module "Restriction of payment methods by product categories" is now installed, you can now apply your settings (Skip to the next chapter).

## Configuration of the module

### Setup and use of the module

#### Tips

##### Quick access from PrestaShop 1.6

You have a quick access to the module on the left menu

##### Quick access from PrestaShop 1.5

You can quickly access the module via "Commands"> "Restriction of payment methods by Product Categories"

After installation, you will find the module "Restriction of payment methods by product category" in the "Module" tab.

To find it easily you can search for "Aduler"; once found, click on 'Configure'.

Front Office Features  
Restriction of payment methods by product categories v1.6.0 - by Aduler.com  
Restricts payment modules according to your defined categories

Configure

### Restrictions Setting

You can see a table with all your product categories in column, and your installed payment modules and available on your PrestaShop website.

#### Restriction of payment methods by product categories

Category restrictions Version: 1.6.0

Please select the payment modules you want to display for each product category

| Restrictions choices |                                     |                                     |                                     |
|----------------------|-------------------------------------|-------------------------------------|-------------------------------------|
| Accueil              | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |
| Femmes               | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |
| Tops                 | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |

You must select for each category of product present on your PrestaShop website, modes of payment you want to make available to your customers.

Initially, the module has no restrictions, so you must "unchecked" the box to apply a restriction.

For example, for the products of the category "Accueil" are available for purchase only with "PayPal Subscriptions" modules and "Bank Transfer"; then the configuration will be:

**Restrictions choices**  
To select/unselect all checkboxes, click on the payment logo

|         |                                     |                          |                                     |
|---------|-------------------------------------|--------------------------|-------------------------------------|
| Accueil | <input checked="" type="checkbox"/> | <input type="checkbox"/> | <input checked="" type="checkbox"/> |
|---------|-------------------------------------|--------------------------|-------------------------------------|

### Module operation in case of conflict

You must choose the mode of operation of the module in case of conflict, for example when several products with different restrictions are added in the same cart.

For example, a product of the category "Accueil" available for purchase with "PayPal Subscriptions" and "Bank Transfer" in the same cart with a product of the category "Femmes" available for purchase with "Paypal Subscriptions" and "cheque".

**Restrictions choices**  
To select/unselect all checkboxes, click on the payment logo

|         |                                     |                                     |                                     |
|---------|-------------------------------------|-------------------------------------|-------------------------------------|
| Accueil | <input checked="" type="checkbox"/> | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |
| Femmes  | <input type="checkbox"/>            | <input checked="" type="checkbox"/> | <input checked="" type="checkbox"/> |

### Conflict mode setting

Sets the module's mode of operation when multiple products are ordered in one cart

Setting mode for conflicts:  Choice of modules displayed during the finalization of the purchase

ALL mode: Shows all payments modules affected by the selected products.

SMART Mode: Displays only identical payment methods between different products.

**Be careful with the "SMART" setting, if no combination is found, no payment module will be displayed**

For our example:

In "All" mode: 3 payment modules will be displayed

"Intelligent" mode: the module will display only "PayPal Subscriptions" (common to both products)

## Frequently asked questions

Q: When I restrict a payment method it seems to be still displayed?

A: If when doing your tests with basic PrestaShop payment modules like cheque and bank transfer, it works well, but other methods of payment does not seem to be limited, it may comes from a known error, thank you to consult the chapter "[Known errors](#)".

Q: Some products are restricted but some other don't?

A: It is quite simple, in order to apply the restriction on the categories, the module is based on the default category of a product and not on the categories for which it is attached. So remember to put the right default category in the "association" of your product in the Back Office.

Q: With the original theme it seems to work but not with my personal theme?

A: This can happen because some themes have functions that can affect other functions; our support service shall be able to understand the mechanism.

## Service and Support

### Service included

With the purchase of the module you will benefit from exclusive services

- Access to "Support Service"
- Fix any bugs in the module as part of the guarantee
- Upgrades to future versions
- On request you can become a beta-tester for future developments of your acquired modules

### Updates and evolution of the module

- We make available for free and for life all our module's updates, on request to the Support.
- Also, you can send us your feedback and suggestions for future versions.

### Guarantee

Cases where the warranty applies:

- Clean install on a functional PrestaShop
- Latest version of the module

The warranty does not cover the following cases:

- If the module has been modified by you or any third party
- If the module is obsolete (too old, outdated)
- If you use a custom theme and it causes a mismatch
- If your version of PrestaShop is not compatible
- If you or your system does not meet the Requirements

## "Support" Service for licensees of Aduler products

### Assistance in case of problems

If you encounter a major problem you can contact our "Support Service"

#### Warning!

Please take note of those points before contacting us:

- Check that there are no problems with the "Compatibility and Requirements"
- Check that your request is not in the "known errors"
- Check that your request does not already appear in the "FAQ"

Email support : [support@aduler.com](mailto:support@aduler.com)

### Configuration's Assistance

To a lower extent and in case of difficulty, we can assist you in configuring your module. Please contact us.

## Additional Services

### Help desk

If you do not want to install the module by yourself, and do the numerous adjustments so that it perfectly meets your needs, you can let our technicians do it for you; for that it is very simple: send us your request with as much detail as possible at: [support@aduler.com](mailto:support@aduler.com)

### Graphic and visual integration service

Our developments are always carried out with the default theme of PrestaShop, but we are aware that a majority of sites brought online are based on tailor-made or purchased themes, we propose our visual integration services so that the module matches to your graphics;

For that is very simple: send us your request with as much detail as possible at: [support@aduler.com](mailto:support@aduler.com)

### Additional Features service

Our work aims to be the most practical and functional for the common uses, however each activity or process may be unique and we know it; that is why we offer our development services for additional and specific needs you may have, for that it is very simple: send us your request with as much detail as possible at: [support@aduler.com](mailto:support@aduler.com)
